msft-datacenter-risk-fy2025

dev grounding drafted verified MP

What risks does Microsoft identify regarding its dependence on cloud infrastructure and data centers?

EXPECTED ANSWER

ANSWER MUST SAY

- Our datacenters depend on the availability of permitted and buildable land, predictable energy, networking supplies, and servers, including graphics processing units and other components.
- There are limited suppliers for certain device and datacenter components.
- The investments we are making in cloud and AI infrastructure and devices will continue to increase our operating costs and may decrease our operating margins.

> **Source:** MSFT FY2025, Item 1A — Risk Factors · filing
>
> OPERATIONAL RISKS
> We may have excessive outages, data losses, and disruptions of our online services if we fail to maintain an adequate operations infrastructure.
> Our increasing user traffic, growth in services, and the complexity of our products and services demand more computing power. We spend substantial amounts to build, purchase, or lease datacenters and equipment and to upgrade our technology and network infrastructure to handle more traffic on our websites and in our datacenters. Our datacenters depend on the availability of permitted and buildable land, predictable energy, networking supplies, and servers, including graphics processing units and other components. The cost or availability of these dependencies could be adversely affected by a variety of factors, including the transition to a clean energy economy, local and regional environmental regulations, and geopolitical disruptions. These demands continue to increase as we introduce new products and services and support the growth and the augmentation of existing services, including through the incorporation of AI features and/or functionality. We are rapidly growing our business of providing a platform and back-end hosting for services provided by third parties to their end users. Maintaining, securing, and expanding this infrastructure is expensive and complex, and requires development of principles for datacenter builds in geographies with higher safety and reliability risks. It requires that we maintain an Internet connectivity infrastructure and storage and compute capacity that is robust and reliable within competitive and regulatory constraints that continue to evolve. Inefficiencies or operational failures, including temporary or permanent loss of customer data, outages, insufficient Internet connectivity, insufficient or unavailable power or water supply, or inadequate storage and compute capacity could diminish the quality of our products, services, and user experience, resulting in contractual liability, claims by customers and other third parties, regulatory actions, damage to our reputation, and loss of current and potential users, subscribers, and advertisers, each of which could adversely affect our business, operations, financial condition, and results of operations.

> **Source:** MSFT FY2025, Item 1A — Risk Factors · filing
>
> We may experience supply or quality problems.
> There are limited suppliers for certain device and datacenter components. We continue to identify and evaluate opportunities to expand our datacenter locations and increase our server capacity to meet the evolving needs of our customers, particularly given the growing demand for AI services. Capacity available to us may be affected as competitors use some of the same suppliers and materials for hardware components. If components are delayed or become unavailable, whether because of supplier capacity constraint, industry shortages, legal or regulatory changes that restrict supply sources, or other reasons, we may not obtain timely replacement supplies, resulting in reduced sales or inadequate datacenter capacity to support the delivery and continued development of our products and services. Component shortages, excess or obsolete inventory, or price reductions resulting in inventory adjustments may increase our cost of revenue. Datacenter servers, Xbox consoles, Surface devices, and other hardware are assembled in Asia and other geographies that may be subject to disruptions in the supply chain, resulting in shortages which could adversely affect our business, operations, financial condition, and results of operations.
> …

> **Source:** MSFT FY2025, Item 7 — Management's Discussion and Analysis · filing
>
> Economic Conditions, Challenges, and Risks
> The markets for software, devices, and cloud-based services are dynamic and highly competitive. Our competitors are developing new software and devices, while also deploying competing cloud-based services for consumers and businesses. The devices and form factors customers prefer evolve rapidly, influencing how users access services in the cloud and, in some cases, the user's choice of which suite of cloud-based services to use. Aggregate demand for our software, services, and devices is also correlated to global macroeconomic and geopolitical factors, which remain dynamic. We must continue to evolve and adapt over an extended time in pace with this changing environment.
> The investments we are making in cloud and AI infrastructure and devices will continue to increase our operating costs and may decrease our operating margins. We continue to identify and evaluate opportunities to expand our datacenter locations and increase our server capacity to meet the evolving needs of our customers, particularly given the growing demand for AI services. Our datacenters depend on the availability of permitted and buildable land, predictable energy, networking supplies, and servers, including graphics processing units ("GPUs") and other components. Our devices are primarily manufactured by third-party contract manufacturers. For the majority of our products, we have the ability to use other manufacturers if a current vendor becomes unavailable or unable to meet our requirements. However, some of our products contain certain components for which there are very few qualified suppliers. Extended disruptions at these suppliers could impact our ability to manufacture devices on time to meet consumer demand.

nvda-export-controls-fy2025

test grounding drafted verified MP

What does NVIDIA say about the risks from U.S. export controls?

EXPECTED ANSWER

ANSWER MUST SAY

- Export controls could disrupt our supply chain and distribution channels, negatively impacting our ability to serve demand, including in markets outside China and for our gaming products.
- Reduced demand due to export controls could also lead to excess inventory or cause us to incur related supply charges.

Source: NVDA FY2025, Item 1A — Risk Factors · filing

…
Such restrictions could include additional unilateral or multilateral export controls on certain products or technology, including but not limited to AI technologies. As geopolitical tensions have increased, semiconductors associated with AI, including GPUs and related products, are increasingly the focus of export control restrictions proposed by stakeholders in the U.S. and its allies. The United States has imposed unilateral worldwide controls restricting GPUs and associated products, and it is likely that additional unilateral or multilateral controls will be adopted. Such controls have been and may again be very broad in scope and application, prohibit us from exporting our products to any or all customers in one or more markets, including but not limited to China and over 150 countries designated “Tier 2” by the January 2025 AI Diffusion IFR, and could negatively impact our manufacturing, testing and warehousing locations and options, or could impose other conditions that limit our ability to serve demand abroad and could negatively and materially impact our business, revenue and financial results. Export controls targeting GPUs and semiconductors associated with AI, which have been imposed and are increasingly likely to be further tightened, would further restrict our ability to export our technology, products, or services even though competitors may not be subject to similar restrictions, creating a competitive disadvantage for us and negatively impacting our business and financial results. Export controls targeting GPUs and semiconductors associated with AI have subjected and may in the future subject downstream users of our products to additional restrictions on the use, resale, repair, or transfer of our products, negatively impacting our business and financial results. Controls could negatively impact our cost and/or ability to provide services such as NVIDIA AI cloud services and could impact the cost and/or ability for our CSPs and customers to provide services to their end customers, even outside China.
Export controls could disrupt our supply chain and distribution channels, negatively impacting our ability to serve demand, including in markets outside China and for our gaming products. The possibility of additional export controls has negatively impacted and may in the future negatively impact demand for our products, benefiting competitors that offer alternatives less likely to be restricted by further controls. Repeated changes in the export control rules are likely to impose compliance burdens on our business and our customers, negatively and materially impacting our business.
Increasing use of economic sanctions and export controls has impacted and may in the future impact demand for our products or services, negatively impacting our business and financial results. Reduced demand due to export controls could also lead to excess inventory or cause us to incur related supply charges. Additional unilateral or multilateral controls are also likely to include deemed export control limitations that negatively impact the ability of our research and development teams to execute our roadmap or other objectives in a timely manner. Additional export restrictions may not only impact our ability to serve overseas markets, but also provoke responses from foreign governments, including China, that negatively impact our supply chain or our ability to provide our products and services to customers in all markets worldwide, which could also substantially reduce our revenue. Regulators in China have inquired about our sales and efforts to supply the China market and our fulfillment of the commitments we entered at the close of our Mellanox acquisition. For example, regulators in China are investigating whether complying with applicable U.S. export controls discriminates unfairly against customers in the China market. If regulators conclude that we have failed to fulfill such commitments or we have violated any applicable law in China, we could be subject to financial penalties, restrictions on our ability to conduct our business, restrictions regarding our networking products and services, or otherwise impact our operations in China, any of which could have a material and adverse impact on our business, operating results and financial condition.

How could tariffs and trade restrictions affect Apple's business?

EXPECTED ANSWER

ANSWER MUST SAY

- Restrictions on international trade, such as tariffs and other controls on imports or exports of goods, technology or data, can materially adversely affect the Company's business and supply chain.
- Beginning in the second quarter of 2025, new tariffs were announced on imports to the U.S.

Source: AAPL FY2025, Item 1A — Risk Factors · filing

…
Political events, trade and other international disputes, geopolitical tensions, conflict, terrorism, natural disasters, public health issues, industrial accidents and other business interruptions can have a material adverse effect on the Company and its customers, employees, suppliers, contract manufacturers, logistics providers, distributors, cellular network carriers and other channel partners.
The Company has a large, global business with sales outside the U.S. representing a majority of the Company's total net sales, and the Company believes that it generally benefits from growth in international trade. A significant majority of the Company's manufacturing is performed in whole or in part by outsourcing partners located primarily in China mainland, India, Japan, South Korea, Taiwan and Vietnam, in addition to sourcing from partners and facilities located in the U.S. Restrictions on international trade, such as tariffs and other controls on imports or exports of goods, technology or data, can materially adversely affect the Company's business and supply chain. The impact can be particularly significant if these restrictive measures apply to countries and regions where the Company derives a significant portion of its revenues and/or has significant supply chain operations. Restrictive measures can increase the cost or limit the availability of the Company's products and the components and rare earths and other raw materials that go into them. Restrictive measures can also require the Company to change suppliers, restructure business relationships and operations, refrain from offering and distributing or cease to offer and distribute affected products, services and third-party applications to its customers, and increase the prices of its products and services. Changing the Company's business and supply chain in accordance with new or changed restrictions on international trade can be expensive, time-consuming and disruptive to the Company's business and results of operations. Trade and other international disputes can also have an adverse impact on the overall macroeconomic environment and result in shifts and reductions in consumer spending and negative consumer sentiment for the Company's products and services, all of which can further adversely affect the Company's business and results of operations. Such restrictions can be announced with little or no advance notice, which can create uncertainty, and the Company may not be able to effectively mitigate any or all adverse impacts from such measures. Global supply chains can be highly concentrated, and an escalation of geopolitical tensions or conflict could result in significant disruptions.
Beginning in the second quarter of 2025, new tariffs were announced on imports to the U.S. ("U.S. Tariffs"), including additional tariffs on imports from China, India, Japan, South Korea, Taiwan, Vietnam and the European Union ("EU"), among others. In response, several countries have imposed, or threatened to impose, reciprocal tariffs on imports from the U.S. and other retaliatory measures. Various modifications to the U.S. Tariffs have been announced and further changes could be made in the future, which may include additional sector-based tariffs or other measures. For example, the U.S. Department of Commerce has initiated an investigation under Section 232 of the Trade Expansion Act of 1962, as amended, into, among other things, imports of semiconductors, semiconductor manufacturing equipment, and their derivative products, including downstream products that contain semiconductors. The ultimate impact remains uncertain and will depend on several factors, including whether additional or incremental U.S. Tariffs or other measures are announced or imposed, to what extent other countries implement tariffs or other retaliatory measures in response, and the overall magnitude and duration of these measures. If disputes and conflicts further escalate, actions by governments in response could be significantly more severe and restrictive.

What risks does Microsoft see in developing and deploying AI?

EXPECTED ANSWER

ANSWER MUST SAY

- AI algorithms or training methodologies may be flawed.
- Content generated by AI systems may be offensive, illegal, inaccurate, or otherwise harmful.

Source: MSFT FY2025, Item 1A — Risk Factors · filing

Issues in the development, deployment, and use of AI may result in reputational or competitive harm or liability . We are building AI into many of our offerings, including our productivity services, and we are also making AI available for our customers to use in solutions that they build. This AI may be developed by Microsoft or others, including our strategic partner, OpenAI. We expect these elements of our business to grow. We envision a future in which AI operating in devices, applications, and the cloud helps our customers be more productive in their work and personal lives. As with many innovations, AI presents risks and challenges that could affect its adoption, and therefore our business. AI algorithms or training methodologies may be flawed. Datasets may be overbroad, insufficient, or contain biased or inaccurate information. Content generated by AI systems may be offensive, illegal, inaccurate, or otherwise harmful. Ineffective or inadequate AI development or deployment practices by Microsoft or others could result in incidents that impair the acceptance of AI solutions, cause harm to individuals, customers, or society, or result in our products and services not working as intended. Human review of certain inputs and outputs may be required, including for agentic AI systems that can take actions autonomously. Our implementation of AI systems could result in legal liability, regulatory action, brand, reputational, or competitive harm, or other adverse impacts. These risks may stem from issues related to intellectual property, data privacy, and other claims associated with AI training and outputs. They are further compounded by the evolving regulatory landscape, with new laws emerging globally, including the European Union (“EU”). Some AI scenarios present ethical issues or may have broad impacts on society. There is also rising divergence globally in how to address these issues and impacts, with the result that we will need to navigate a web of different tensions across geographies. Finally, if we enable or offer AI solutions that have unintended consequences, unintended usage or customization by our customers and partners, are contrary to our responsible AI policies and practices, or are otherwise controversial because of the impact on human rights, privacy, employment, or other social, economic, or political issues, our reputation, competitive position, business, financial condition, and results of operations could be adversely affected.

Human Capital
The Company believes that its people play an important role in its success, and strives to attract, develop and retain
the best talent. The Company works to create a culture of collaboration, one where people with a broad range of
backgrounds and perspectives can come together to innovate and do the best work of their lives. The Company is an
equal opportunity employer committed to inclusion and to providing a workplace free of harassment or discrimination.
As of September 27, 2025, the Company had approximately 166,000 full-time equivalent employees.
The Company believes that compensation should be competitive and equitable, and offers discretionary cash and equity
awards to enable employees to share in the Company's success. The Company recognizes its people are most likely to
thrive when they have the resources to meet their needs and the time and support to succeed in their professional and
personal lives. In support of this, the Company offers a wide variety of benefits for employees around the world,
including health, wellness and time away.
The Company invests in resources to help its people develop and achieve their career goals. The Company offers
programs through Apple University on leadership, management and influence, as well as Apple culture and values. Team
members can also take advantage of online classes for business, technical and personal development.

Human Capital
Our employees are critical to our mission of being Earth's most customer-centric company. As of December 31, 2025, we
employed approximately 1,576,000 full-time and part-time employees. Additionally, we use independent contractors and
temporary personnel to supplement our workforce. Competition for qualified personnel is intense, particularly for
software engineers, computer scientists, and other technical staff (including for artificial intelligence and machine
learning technologies), and constrained labor markets have increased competition for personnel across other parts of
our business.
We strive to be Earth's best employer. We rely on numerous and evolving initiatives to implement this objective and
invent mechanisms for talent development, including competitive pay and benefits, flexible work arrangements, and
skills training and educational programs such as Amazon Career Choice (education funding for eligible employees). Over
300,000 Amazon employees around the world have participated in Career Choice. We also continue to inspect and refine
the mechanisms we use to hire, develop, evaluate, and retain our employees. In addition, safety is integral to
everything we do at Amazon and we continue to invest in safety improvements such as capital improvements, new safety
technology, vehicle safety controls, and engineering ergonomic solutions. Our safety team is dedicated to using the
science of safety to solve complex problems and establish new industry best practices. We also provide mentorship and
support resources to our employees, and have deployed numerous programs that advance employee engagement,
communication, and feedback.
```

Source: MSFT FY2025, Item 1 — Human Capital · filing

```
HUMAN CAPITAL RESOURCES
As of June 30, 2025, we employed approximately 228,000 people on a full-time basis, 125,000 in the U.S. and 103,000
internationally. Of the total employees, 89,000 were in operations, including product support and consulting services,
datacenter operations, and manufacturing and distribution; 80,000 were in product research and development; 44,000
were in sales and marketing; and 15,000 were in general and administration. Certain employees are subject to
collective bargaining agreements.
We design our programs to attract, reward, and retain top talent while fostering continuous employee development and
reinforcing our organizational culture and values. Our total compensation offering is both highly differentiated and
competitive within the market, and we also monitor pay equity across multiple dimensions. We have invested
significantly in employee wellbeing and offer a differentiated benefits package which includes many physical,
emotional, and financial wellness programs. We also provide access to continuous learning through a wide range of
internal and external content, supporting professional growth across roles and disciplines. Through our employee
listening systems, we gather direct feedback from our workforce, enabling us to adapt our programs and address
employee needs globally with real-time insights. Additionally, our culture prioritizes the security of both our
customers and Microsoft, embedding this responsibility across all teams and functions.
```

Source: NVDA FY2025, Item 1 — Human Capital · filing

```
Human Capital Management
We believe that our employees are our greatest assets, and they play a key role in creating long-term value for our
stakeholders. As of the end of fiscal year 2025, we had approximately 36,000 employees in 38 countries; 27,100 were
engaged in research and development and 8,900 were engaged in sales, marketing, operations, and administrative
positions. The Compensation Committee of our Board of Directors assists in the oversight of policies and strategies
relating to human capital management.
To execute our business strategy successfully, we must recruit, develop, and retain the very best talent globally,
including exceptional executives, scientists, engineers, and technical and non-technical staff.

How do Apple, Amazon, Microsoft and NVIDIA each describe the risk of security breaches or cyberattacks?

EXPECTED ANSWER

ANSWER MUST SAY

- Losses or unauthorized access to or releases of confidential information, including personal information, could subject the Company to significant reputational, financial, legal and operational consequences.
- We Could Be Harmed by Data Loss or Other Security Incidents
- Inadequate account security or organizational security practices, including those of companies we have acquired or those of the third parties we utilize, have resulted and may result in unauthorized access to our systems and data, including customer systems and data.
- Product, system security, and data protection incidents or breaches, as well as cyber-attacks, could disrupt our operations, reduce our expected revenue, increase our expenses, and significantly harm our business and reputation.

Source: AAPL FY2025, Item 1A — Risk Factors · filing

Losses or unauthorized access to or releases of confidential information, including personal information, could subject the Company to significant reputational, financial, legal and operational consequences.
The Company’s business requires it to use and store confidential information, including personal and sensitive health and financial information with respect to the Company’s customers and employees. The Company devotes significant resources to systems and data security, including through the use of encryption and other security measures intended to protect its systems and data. But these measures cannot provide absolute security, and losses or unauthorized access to or releases of confidential information occur and could materially adversely affect the Company’s business, reputation, results of operations, financial condition and stock price.
The Company’s business also requires it to share confidential information with suppliers and other third parties. The Company relies on global suppliers that are also exposed to ransomware and other malicious attacks that can disrupt business operations. Although the Company takes steps to secure confidential information that is provided to or accessible by third parties working on the Company’s behalf, such measures are not always effective and losses or unauthorized access to, or releases of, confidential information occur. Such incidents and other malicious attacks could materially adversely affect the Company’s business, reputation, results of operations, financial condition and stock price.
…

Source: AMZN FY2025, Item 1A — Risk Factors · filing

We Could Be Harmed by Data Loss or Other Security Incidents
Because we collect, process, store, and transmit large amounts of data, including confidential, classified, sensitive, proprietary, and business and personal information, failure to prevent, detect, or mitigate data loss, theft, misuse, unauthorized access, or other security incidents or vulnerabilities affecting our or our vendors’ or customers’ technology, products, and systems, could: expose us or our customers to a risk of loss, disclosure, or misuse of such information; adversely affect our operating results; result in litigation, liability, or regulatory action (including under laws related to privacy, data use, data protection, data security, network security, and consumer protection); deter customers or sellers from using our stores, products, and services; and otherwise harm our business and reputation. We use third-party technology and systems for a variety of reasons, including, without limitation, artificial intelligence technologies, encryption and authentication technology, employee email and other communication technologies, content delivery to customers, back-office support, and other functions. Some of our systems have experienced past security incidents, and, although they did not have a material adverse effect on our operating results, there can be no assurance that future incidents will not have material adverse effects on our operations or financial results. Although we have developed systems and processes that are designed to protect customer data and prevent, detect, or mitigate such incidents, including systems and processes designed to reduce the impact of a security incident at a third-party vendor or customer, such measures cannot provide absolute security and may fail to operate as intended or be circumvented, including by use of developing technologies such as artificial intelligence.

Source: MSFT FY2025, Item 1A — Risk Factors · filing

…
Threats to security can take a variety of forms. Threat actors, including individual and groups of hackers and sophisticated organizations, including nation-states, state-sponsored organizations, or cybercriminal groups, continuously undertake attacks that pose threats to our customers and our internal infrastructure, and we have experienced cybersecurity incidents in which such actors have gained unauthorized access to our systems and data, including customer systems and data. These actors use a wide variety of methods, which include developing and deploying malicious software; exploiting known and potential vulnerabilities or intentionally designed processes in our or third-party hardware, software, or other infrastructure to attack our products and services or gain access to our networks and datacenters; using social engineering techniques to induce our employees, users, partners, or customers to disclose sensitive information, such as passwords, or take other actions to gain access to our data or our users’ or customers’ data; or acting in a coordinated manner or conducting coordinated attacks. For example, as previously disclosed in our Form 8-K filed with the Securities and Exchange Commission on January 19, 2024 and amended on March 8, 2024, beginning in late November 2023, a nation-state associated threat actor used a password spray attack to compromise a legacy test account and, in turn, gain access to Microsoft email accounts. The threat actor used information it obtained to gain unauthorized access to some of our source code repositories and internal systems, and the threat actor could continue to utilize this and other information to attempt to gain access to our systems or otherwise adversely affect our business and results of operations. This incident has and may continue to result in harm to our reputation and customer relationships. Nation-state and state-sponsored actors can sustain malicious activities for extended periods and deploy significant resources to plan and carry out attacks. Nation-state attacks against us, our customers, or our partners have and may continue to intensify due to our transparency to our customers, other stakeholders, and the public about cyberattacks, and during elections or periods of intense diplomatic or armed conflict. Challenges or failures in applying security patches to all hardware and devices connected to our systems, including end-of-life and end-of-support equipment, have and may continue to result in unauthorized access to our systems and data in the future. Cyber incidents and attacks, individually or in the aggregate, could adversely affect our financial condition, results of operations, competitive position, and

reputation, or expose us to legal or regulatory risk.
Inadequate account security or organizational security practices, including those of companies we have acquired or those of the third parties we utilize, have resulted and may result in unauthorized access to our systems and data, including customer systems and data. For example, passwords may not be rotated and employee access may not be updated or removed on a timely basis. Employees or third parties may intentionally compromise our or our users' security or systems or reveal confidential information, and laws in foreign jurisdictions may compel actions by such parties against our interests and could limit our recourse. Malicious actors may employ the supply chain to introduce malware through software updates or compromised supplier accounts or hardware.
Cyberthreats are constantly evolving and becoming increasingly sophisticated and complex, increasing the difficulty of detecting and successfully defending against them. Threat actors may also utilize emerging technologies, such as AI and machine learning. Our current capabilities may not detect certain vulnerabilities or new attack methods, which may allow them to persist in the environment over long periods of time. It may be difficult to determine the best way to investigate, mitigate, contain, and remediate the harm caused by a cyber incident. Such efforts may not be successful, and we may make errors or fail to take necessary actions. It is possible that threat actors may gain undetected access to other networks and systems after establishing a foothold on an internal system. Cyber incidents and attacks can have cascading impacts that unfold with increasing speed across our internal networks and systems, as well as those of our partners and customers. In addition, it may take considerable time for us to investigate and evaluate the full impact of incidents, particularly for sophisticated attacks. As a result of these and other factors, we may not be able to provide prompt, full, and reliable information about the incident to our customers, partners, regulators, and the public. Breaches of our facilities, network, or data security can disrupt the security of our systems and business applications, impair our ability to provide services to our customers and protect the privacy of their data, result in product development delays, compromise confidential or technical business information, result in theft or misuse of our intellectual property or other assets, subject us to ransomware attacks, require us to allocate more resources to improve technologies or remediate the impacts of attacks, or otherwise adversely affect our business. In addition, actions taken to remediate an incident could result in outages, data losses, and disruptions of our services.
…

Source: NVDA FY2025, Item 1A — Risk Factors · filing

Product, system security, and data protection incidents or breaches, as well as cyber-attacks, could disrupt our operations, reduce our expected revenue, increase our expenses, and significantly harm our business and reputation.
Security breaches, computer malware, social-engineering attacks, denial-of-service attacks, software bugs, server malfunctions, software or hardware failures, loss of data or other information technology assets, and other cyber-attacks are becoming increasingly sophisticated, making it more difficult to successfully detect, defend against them or implement adequate preventative measures.
Cyber-attacks, including ransomware attacks by organized criminal threat actors, nation-states, and nation-state-supported actors, may become more prevalent and severe. Our ability to recover from ransomware attacks may be limited if our backups have been affected by the attack, or if restore from backups is delayed or not feasible.

What supply-chain risks do Apple and NVIDIA describe in their latest 10-Ks?

EXPECTED ANSWER

ANSWER MUST SAY

- The Company depends on component and product manufacturing and logistical services provided by outsourcing partners, many of which are located outside of the U.S.
- Dependency on third-party suppliers and their technology to manufacture, assemble, test, or package our products reduces our control over product quantity and quality, manufacturing yields, and product delivery schedules and could harm our business.

> **Source:** AAPL FY2025, Item 1A — Risk Factors · filing
>
> The Company depends on component and product manufacturing and logistical services provided by outsourcing partners, many of which are located outside of the U.S.
> A significant majority of the Company's manufacturing is performed in whole or in part by outsourcing partners located primarily in China mainland, India, Japan, South Korea, Taiwan and Vietnam, in addition to sourcing from partners and facilities located in the U.S. The Company relies on single-source partners in the U.S., Asia and Europe to supply and manufacture many components, and on partners primarily located in Asia, for final assembly of substantially all of the Company's hardware products. The Company has also outsourced much of its transportation and logistics management. While these arrangements can lower operating costs, they also reduce the Company's direct control over production and distribution. Such diminished control has from time to time had, and may in the future have, an adverse effect on the cost, quality or quantity of products manufactured or services provided, or adversely affect the Company's flexibility to respond to changing conditions. Although arrangements with these partners may contain provisions for product defect expense reimbursement, the Company generally remains responsible to the consumer for warranty and out-of-warranty service in the event of product defects and experiences unanticipated product defect liabilities from time to time. While the Company relies on its partners to adhere to its supplier code of conduct, violations of the supplier code of conduct occur from time to time and can materially adversely affect the Company's business, reputation, results of operations, financial condition and stock price.
> …

> **Source:** NVDA FY2025, Item 1A — Risk Factors · filing
>
> Risks Related to Demand, Supply, and Manufacturing
> • Long manufacturing lead times and uncertain supply and component availability, combined with a failure to estimate customer demand accurately has led and could lead to mismatches between supply and demand.
> • Dependency on third-party suppliers and their technology to manufacture, assemble, test, or package our products reduces our control over product quantity and quality, manufacturing yields, and product delivery schedules and could harm our business.
> • Defects in our products have caused and could cause us to incur significant expenses to remediate and could damage our business.

Human Capital
The Company believes that its people play an important role in its success, and strives to attract, develop and retain
the best talent. The Company works to create a culture of collaboration, one where people with a broad range of
backgrounds and perspectives can come together to innovate and do the best work of their lives. The Company is an
equal opportunity employer committed to inclusion and to providing a workplace free of harassment or discrimination.
As of September 27, 2025, the Company had approximately 166,000 full-time equivalent employees.
The Company believes that compensation should be competitive and equitable, and offers discretionary cash and equity
awards to enable employees to share in the Company's success. The Company recognizes its people are most likely to
thrive when they have the resources to meet their needs and the time and support to succeed in their professional and
personal lives. In support of this, the Company offers a wide variety of benefits for employees around the world,
including health, wellness and time away.
The Company invests in resources to help its people develop and achieve their career goals. The Company offers
programs through Apple University on leadership, management and influence, as well as Apple culture and values. Team
members can also take advantage of online classes for business, technical and personal development.

Human Capital
Our employees are critical to our mission of being Earth's most customer-centric company. As of December 31, 2025, we
employed approximately 1,576,000 full-time and part-time employees. Additionally, we use independent contractors and
temporary personnel to supplement our workforce. Competition for qualified personnel is intense, particularly for
software engineers, computer scientists, and other technical staff (including for artificial intelligence and machine
learning technologies), and constrained labor markets have increased competition for personnel across other parts of
our business.
We strive to be Earth's best employer. We rely on numerous and evolving initiatives to implement this objective and
invent mechanisms for talent development, including competitive pay and benefits, flexible work arrangements, and
skills training and educational programs such as Amazon Career Choice (education funding for eligible employees). Over
300,000 Amazon employees around the world have participated in Career Choice. We also continue to inspect and refine
the mechanisms we use to hire, develop, evaluate, and retain our employees. In addition, safety is integral to
everything we do at Amazon and we continue to invest in safety improvements such as capital improvements, new safety
technology, vehicle safety controls, and engineering ergonomic solutions. Our safety team is dedicated to using the
science of safety to solve complex problems and establish new industry best practices. We also provide mentorship and
support resources to our employees, and have deployed numerous programs that advance employee engagement,
communication, and feedback.
```

Source: MSFT FY2025, Item 1 — Human Capital · filing

```
HUMAN CAPITAL RESOURCES
As of June 30, 2025, we employed approximately 228,000 people on a full-time basis, 125,000 in the U.S. and 103,000
internationally. Of the total employees, 89,000 were in operations, including product support and consulting services,
datacenter operations, and manufacturing and distribution; 80,000 were in product research and development; 44,000
were in sales and marketing; and 15,000 were in general and administration. Certain employees are subject to
collective bargaining agreements.
We design our programs to attract, reward, and retain top talent while fostering continuous employee development and
reinforcing our organizational culture and values. Our total compensation offering is both highly differentiated and
competitive within the market, and we also monitor pay equity across multiple dimensions. We have invested
significantly in employee wellbeing and offer a differentiated benefits package which includes many physical,
emotional, and financial wellness programs. We also provide access to continuous learning through a wide range of
internal and external content, supporting professional growth across roles and disciplines. Through our employee
listening systems, we gather direct feedback from our workforce, enabling us to adapt our programs and address
employee needs globally with real-time insights. Additionally, our culture prioritizes the security of both our
customers and Microsoft, embedding this responsibility across all teams and functions.
```

Source: NVDA FY2025, Item 1 — Human Capital · filing

```
Human Capital Management
We believe that our employees are our greatest assets, and they play a key role in creating long-term value for our
stakeholders. As of the end of fiscal year 2025, we had approximately 36,000 employees in 38 countries; 27,100 were
engaged in research and development and 8,900 were engaged in sales, marketing, operations, and administrative
positions. The Compensation Committee of our Board of Directors assists in the oversight of policies and strategies
relating to human capital management.
To execute our business strategy successfully, we must recruit, develop, and retain the very best talent globally,
including exceptional executives, scientists, engineers, and technical and non-technical staff.
```

`open-china-export-controls-fy2025` dev grounding drafted verified MP

Which company says its Data Center revenue in China remains well below levels seen before U.S. export controls?

EXPECTED ANSWER

ANSWER MUST SAY

- Our Data Center revenue in China grew in fiscal year 2025. As a percentage of total Data Center revenue, it remains well below levels seen prior to the onset of export controls in October 2023.

> **Source:** NVDA FY2025, Item 7 — Management's Discussion and Analysis · filing
>
> …
> In October 2023, the USG announced new and updated licensing requirements that became effective in our fourth quarter of fiscal year 2024 for exports to China and Country Groups D1, D4, and D5 (including but not limited to Saudi Arabia, the United Arab Emirates, and Vietnam, but excluding Israel) of our products exceeding certain performance thresholds, including, but not limited to, the A100, A800, H100, H800, L4, L40, L40S and RTX 4090. The licensing requirements also apply to the export of products exceeding certain performance thresholds to a party headquartered in, or with an ultimate parent headquartered in, Country Group D5, including China. On October 23, 2023, the USG informed us that the licensing requirements were effective immediately for shipments of our A100, A800, H100, H800, and L40S products (removing the grace period granted by the official rule). Blackwell systems, such as GB200 NVL 72 and NVL 36 as well as B200 are also subject to these requirements and therefore require a license for any shipment to certain entities and to China and Country Groups D1, D4 and D5, excluding Israel. To date, we have not received licenses to ship these restricted products to China. Additionally, we understand that partners and customers have also not received a license to ship these restricted products.
> We expanded our Data Center product portfolio to offer new solutions, including those for which the USG does not require a license or advance notice before each shipment. We ramped new products designed specifically for China that do not require an export control license. Our Data Center revenue in China grew in fiscal year 2025. As a percentage of total Data Center revenue, it remains well below levels seen prior to the onset of export controls in October 2023.
> The market in China for datacenter solutions remains competitive. We will continue to comply with export controls while serving our customers. To the extent that a customer requires products covered by the licensing requirements, we may seek a license for the customer but have no assurance that the USG will grant such a license, or that the USG will act on the license application in a timely manner or at all.
> On January 15, 2025, the USG published the "AI Diffusion" IFR in the Federal Register. After a 120-day delayed compliance period, the IFR will, unless modified, impose a worldwide licensing requirement on all products classified under Export Control Classification Numbers, or ECCNs, 3A090.a, 4A090.a, or corresponding .z ECCNs, including all related software and technology. Any system that incorporates one or more of the covered integrated circuits, or ICs, (including but not limited to NVIDIA DGX, HGX, and MGX systems) will be covered by the new licensing requirement. The licensing requirement will include future NVIDIA ICs, boards, or systems classified with ECCN 3A090.a or 4A090.a, or corresponding .z ECCNs, achieving certain total processing performance and/or performance density.

`open-cloud-growth-34pct-fy2025` test grounding drafted verified MP

Whose cloud services revenue grew 34% in fiscal 2025?

EXPECTED ANSWER

ANSWER MUST SAY

- Azure and other cloud services revenue grew 34% driven by demand for our portfolio of services.

> **Source:** MSFT FY2025, Item 7 — Management's Discussion and Analysis · filing

```
Intelligent Cloud
Revenue increased $18.8 billion or 21%.
•
Server products and cloud services revenue increased $18.6 billion or 23% driven by Azure and other cloud services.
Azure and other cloud services revenue grew 34% driven by demand for our portfolio of services. Server products
revenue decreased 3% driven by a decrease in transactional purchasing with continued customer shift to cloud
offerings.
•
Enterprise and partner services revenue increased $166 million or 2% driven by growth in Enterprise Support Services,
offset in part by a decline in Industry Solutions.
Operating income increased $6.8 billion or 18%.
•
Cost of revenue increased $10.6 billion or 36% driven by growth in Azure.
•
Gross margin increased $8.2 billion or 14% driven by growth in Azure. Gross margin percentage decreased driven by the
impact of scaling our AI infrastructure, offset in part by efficiency gains in Azure.
•
Operating expenses increased $1.5 billion or 7% driven by investments in cloud and AI engineering.

What drove NVIDIA's Data Center revenue growth in fiscal 2025?

EXPECTED ANSWER

ANSWER MUST SAY

- Data Center revenue for fiscal year 2025 was up 142% from a year ago. The strong year-on-year growth was driven by demand for our Hopper architecture accelerated computing platform used for large language models, recommendation engines, and generative AI applications.

> **Source:** NVDA FY2025, Item 7 — Management's Discussion and Analysis · filing
>
> ```
> Fiscal Year 2025 Summary
> We specialize in markets where our computing platforms can provide tremendous acceleration for applications. These
> platforms incorporate processors, interconnects, software, algorithms, systems, and services to deliver unique value.
> Our platforms address four large markets where our expertise is critical: Data Center, Gaming, Professional
> Visualization, and Automotive.
> Revenue for fiscal year 2025 was $130.5 billion, up 114% from a year ago.
> Data Center revenue for fiscal year 2025 was up 142% from a year ago. The strong year-on-year growth was driven by
> demand for our Hopper architecture accelerated computing platform used for large language models, recommendation
> engines, and generative AI applications. We began shipping production systems of the Blackwell architecture in the
> fourth quarter of fiscal year 2025.
> Gaming revenue for fiscal year 2025 was up 9% from a year ago, driven by sales of our GeForce RTX 40 Series GPUs.
> Professional Visualization revenue for fiscal year 2025 was up 21% from a year ago, driven by the continued ramp of
> Ada RTX GPU workstations for use cases such as generative AI-powered design, simulation, and engineering.
> Automotive revenue for fiscal year 2025 was up 55% from a year ago, driven by sales of our self-driving platforms.
> Gross margin increased in fiscal year 2025 driven by a higher mix of Data Center revenue.
> Operating expenses for fiscal year 2025 were up 45% from a year ago, driven by higher compensation and benefits
> expenses due to employee growth and compensation increases, and engineering development, compute and infrastructure
> costs for new product introductions.
> ```
