# Uber Technologies, Inc. (UBER) · Earnings update · 2026Q2

As of 2026-08-06 · Status: DRAFT for senior analyst review · Prepared by: research agent

No rating or PT is approved until the responsible analyst confirms it.

> **Public copy, redacted.** Prices, macro and ERP data are licensed or third-party data kept local, so every value that comes from them (rating, price, PT, return, market cap, EV, 52-week range, multiples, WACC, beta, DCF values, PT impacts) reads "local only". Run `tenk setup` with your own keys, then `tenk research report UBER --as-of 2026-08-06`, to see the full note.

## 1. EXECUTIVE SUMMARY

| Draft rating | Price | 12-month PT | Return | Market cap | EV | 52-week | Next earnings |
|---|---|---|---|---|---|---|---|
| local only | local only | local only | local only | local only | local only | local only | 2026-11-04 (est.) |

Rating / PT change: initial draft (no prior version)

- Beat: 2026Q2 revenue of $14.2B (+12.2% y/y) and adj. EBITDA of $2.8B (+33.0% y/y) beat our estimates by +0.8% and +2.5%, respectively.

- Outlook: Gross bookings reached $58.0B in 2026Q2, exceeding our $57.0B estimate, while adj. EBITDA met the $2.8B guidance midpoint.

- Estimates: rating, price target and return are local only.

- Valuation: multiples, WACC and beta are local only.

- Thesis (hypothesis): UBER’s ability to drive gross bookings growth while expanding adj. EBITDA margins justifies a valuation premium over peers.

## 2. EARNINGS RESULTS

2.1 Headline (2026Q2)

| | Actual | Our est. | Var. | Guide mid | Var. vs mid | Y/Y |
|---|---|---|---|---|---|---|
| Revenue | $14.2B | $14.1B | +0.8% | n/a | n/a | +12.2% |
| Adj. EBITDA | $2.8B | $2.8B | +2.5% | $2.8B | +2.5% | +33.0% |
| Gross bookings | $58.0B | $57.0B | +1.8% | $57.0B | +1.8% | +24.1% |
| Diluted EPS | $1.17 | $0.89 | +32.1% | n/a | n/a | +85.7% |

2.2 Guidance for 2026Q3

| Guided line | Midpoint | Our forecast | Var. vs mid |
|---|---|---|---|
| gross bookings | $59.2B | $59.2B | 0.0% |
| adj ebitda | $2.9B | $2.9B | 0.0% |

2.3 Quality of the quarter

| | 2026Q2 | 2025Q2 | Change |
|---|---|---|---|
| Trips | 3.87B | 3.27B | +18.3% |
| Gross bookings | $58.0B | $46.8B | +24.1% |
| Take rate | 24.5% | 27.1% | -2.6 pts |
| Adj. EBITDA margin | 19.9% | 16.7% | +3.1 pts |
| operating cash flow | $2.9B | $2.6B | +11.6% |
| capex | $70M | $89M | -21.3% |
| Free cash flow | $2.8B | $2.5B | +12.8% |
| SBC | $550M | $475M | +15.8% |

Gross bookings of $58.0B in 2026Q2 rose +24.1% y/y, outpacing the +18.3% growth in trips to 3.87B, indicating price leverage despite a take rate decline of -2.6 pts to 24.5%. Profitability improved significantly, with Adj. EBITDA margin

expanding +3.1 pts to 19.9%. Cash generation remained robust as Free cash flow reached $2.8B, up +12.8% y/y, supported by operating cash flow of $2.9B and lower capex of $70M. The primary risk remains SBC, which increased +15.8% y/y to $550M.

## 3. DRIVERS AND KEY DEBATES

3.1 Will Uber's Mobility take rate remain stable or expand in 2026Q3, or will it face compression from regulatory and competitive headwinds?

Bear: Regulatory caps and competition could compress the take rate below the model's 21.99% assumption. Hypothesis: We assume the take rate will hold near recent levels, consistent with the 22.0% assumption. Trigger: A significant drop in Mobility revenue growth relative to gross bookings growth in the 2026Q3 earnings report. Data gap: The data does not provide a direct breakdown of take rate by region or product type.

3.2 Will Uber's Delivery take rate continue to expand due to advertising mix and operational leverage, or will it compress due to competitive fee caps and merchant pushback?

Bull: Delivery revenue reached $5.1B in 2026Q1 against $26.0B in gross bookings, supporting the view that advertising mix and operational leverage are sustaining take rate expansion.

Bear: Rapid growth in Delivery Gross Bookings to $26.0B in 2026Q1 raises concerns that competitive fee caps and merchant pushback could compress margins if revenue growth lags.

Hypothesis: The model assumption of 26.4% for gb_g_delivery.g0 appears inconsistent with the implied take rate from 2026Q1 actuals, suggesting it may reflect a blended profitability metric rather than standard take rate.

Trigger: A sequential decline in Delivery Take Rate in 2026Q2 earnings would signal competitive compression, while an increase would confirm the advertising mix thesis.

Data gap: The data does not explicitly break out the contribution of advertising revenue to take rate expansion versus pure fee increases, limiting visibility into margin sustainability.

3.3 Will Uber's mobility take rate stabilize or continue to compress in 2026?

Bull: Mobility revenue reached $8.2B in 2025Q4, supported by $27.4B in gross bookings, suggesting scale benefits.

Bear: Mobility revenue fell to $6.8B in 2026Q1 despite $26.4B in gross bookings, indicating pricing pressure.

Hypothesis: We model a -5.3% shift in the mobility take rate assumption based on the 2026Q1 deterioration.

Trigger: Management guidance attributing the 2026Q1 decline to one-off items would invalidate the lower equilibrium.

Data gap: We lack granular data on the mix of UberX vs. Uber Black trips and autonomous vehicle testing costs.

## 4. ESTIMATE REVISIONS AND MODEL IMPACT

Initial draft: no prior version to revise.

4.3 Integrity checks (layer 2)
