Uber Technologies, Inc. (UBER) · Earnings update · 2026Q2

As of 2026-08-06 · Status: DRAFT for senior analyst review · Prepared by: research agent

No rating or PT is approved until the responsible analyst confirms it.

> **Public copy, redacted.** Prices, macro and ERP data are licensed or third-party data kept local, so every value that comes from them (rating, price, PT, return, market cap, EV, 52-week range, multiples, WACC, beta, DCF values, PT impacts) reads "local only". Run `tenk setup` with your own keys, then `tenk research report UBER --as-of 2026-08-06`, to see the full note.

1. EXECUTIVE SUMMARY

Draft rating	Price	12-month PT	Return	Market cap	EV	52-week	Next earnings
local only	local only	local only	local only	local only	local only	local only	2026-11-04 (est.)

Rating / PT change: initial draft (no prior run)

• Beat: 2026Q2 revenue of $14.2B (+12.2% y/y) and adj. EBITDA of $2.8B (+33.0% y/y) topped our estimates and guidance.

• Outlook: Gross bookings reached $58.0B in 2026Q2, exceeding our $57.0B estimate.

• Estimates: rating, price target and return are local only.

• Valuation: multiples, WACC and beta are local only.

Thesis (hypothesis): UBER’s accelerating profitability and scale justify a premium to peers despite near-term valuation multiples.

2. EARNINGS RESULTS

2.1 Headline (2026Q2)

	Actual	Our est.	Var.	Guide mid	Var. vs mid	Y/Y
Revenue	$14.2B	$14.1B	+0.8%	n/a	n/a	+12.2%
Adj. EBITDA	$2.8B	$2.8B	+2.5%	$2.8B	+2.5%	+33.0%
Gross bookings	$58.0B	$57.0B	+1.8%	$57.0B	+1.8%	+24.1%
Diluted EPS	$1.17	$0.89	+32.1%	n/a	n/a	+85.7%

Our estimate: the model as of the day after the previous release. Variances use unrounded values.

2.2 Guidance for 2026Q3

Guided line	Midpoint	Our forecast	Var. vs mid
gross bookings	$59.2B	$59.2B	0.0%
adj ebitda	$2.9B	$2.9B	0.0%

2.3 Quality of the quarter

	2026Q2	2025Q2	Change
Trips	3.87B	3.27B	+18.3%
Gross bookings	$58.0B	$46.8B	+24.1%
Take rate	24.5%	27.1%	-2.6 pts
Adj. EBITDA margin	19.9%	16.7%	+3.1 pts
operating cash flow	$2.9B	$2.6B	+11.6%
capex	$70M	$89M	-21.3%
Free cash flow	$2.8B	$2.5B	+12.8%
SBC	$550M	$475M	+15.8%

Uber delivered a strong 2026Q2, with gross bookings rising 24.1% y/y to $58.0B, outpacing the 18.3% growth in trips to $3.87B. This volume-price mix expansion occurred despite a 2.6 pt decline in take rate to 24.5%, driving adjusted EBITDA margin up 3.1 pts to 19.9%. Cash generation remained robust, with free cash flow increasing 12.8% y/y to $2.8B, supported by operating cash flow of $2.9B and lower capex of $70M. The quarter highlights the company's ability to scale profitability while maintaining significant cash conversion.

3. DRIVERS AND KEY DEBATES

3.1 What next for Mobility gross bookings growth?

Bull: Mobility gross bookings reached $29.0B in 2026Q2, up from $26.4B in 2026Q1.

Bear: Take rate stability is threatened by potential increases in driver incentives.

Hypothesis: We model a Mobility take rate of 22.0% for the base case.

Trigger: Divergence between revenue and gross bookings growth in upcoming earnings.

Data gap: No explicit breakdown of driver incentive impact on 2026 take rates.

3.2 What next for Delivery gross bookings growth?

Bull: The model assumes a Delivery take rate of 26.4% for 2026Q2, driven by higher-margin advertising and Uber One subscriptions. Hypothesis: We assume the 26.4% figure is an outlier, as it deviates sharply from the consistent take rate trend seen in 2023-2025 filings. Data gap: We lack the specific 2026Q2 Delivery Revenue and Gross Bookings figures to calculate the actual take rate, though 2026Q1 Gross Bookings were $26.0B.

3.3 What next for Mobility take rate?

Bull: Mobility revenue growth has recently lagged Gross Bookings growth, suggesting the take rate has already compressed significantly and may stabilize.

Bear: The UK business model change previously provided a significant net benefit that is now fully integrated and no longer providing incremental lift.

Hypothesis: We assume a -5.3% shift in the mobility take rate, reflecting ongoing erosion as UK benefits normalize and competition mounts.

Trigger: A quarterly report showing Mobility revenue growth outpacing Gross Bookings growth would challenge the view of continued take rate decline.

Data gap: The data does not provide a direct, granular breakdown of the take rate components by region, making it difficult to isolate the specific impact of the UK business model change normalization versus competitive dynamics in other markets.

4. ESTIMATE REVISIONS AND MODEL IMPACT

Initial draft (no prior run): no old estimates to revise.

4.2 Integrity checks (layer 2)

6. VALUATION

Comps (2027E EV/EBITDA): CART local only · DASH local only · LYFT local only · median local only · UBER now local only

Scenario	PT	Multiple	DCF / share	Weight
Bear	local only	local only	local only	25%
Base	local only	local only	local only	50%
Bull	local only	local only	local only	25%

Method: 60% EV/EBITDA + 40% DCF (a DCF with a non-positive EV is left out); WACC and β local only.

Probability-weighted price target, return and rating: local only.

Target multiple justification and DCF comparison: local only.

7. RISKS AND SENSITIVITY

Risk	2027E adj. EBITDA	PT impact
take rate -0.5 pts	-$541M	local only
growth -1.0 pts	-$12M	local only
costs as a share of gross bookings +0.5 pts	-$1.1B	local only
debated: gb g mobility -1.0 pts	-$87M	local only
debated: take rate mobility -0.5 pts	-$225M	local only

Probabilities beyond the scenario weights in section 6 are not assigned.

8. CATALYSTS

2026-11-04: next earnings (estimated from the last release date; not announced). Watch the guided lines in section 2.2.

9. SOURCES, ASSUMPTIONS, DISCLOSURES

Data as of 2026-08-06: 10-K 2025 (filed 2026-02-13); 10-Q 2026Q2 (filed 2026-08-05); DEF14A 2025 (filed 2026-03-23); ER 2026Q2 (filed 2026-08-05); prices (Tiingo); FRED DGS10; Damodaran ERP

Key assumptions: cost_to_gb.shift0 = -0.0287 (guidance); fade = 0.9000; gb_g_delivery.g0 = 0.2636; gb_g_freight.g0 = 0.2468; gb_g_mobility.g0 = 0.2199; take_rate_delivery.shift0 = 0.0022; take_rate_freight.shift0 = 0.0068; take_rate_mobility.shift0 = -0.0527; trips_g.g0 = 0.1833. Full register: workbook tab Assumptions.

Insider activity in 2026Q2 (Form 4, dilution context): 67.5M shares sold in the open market ($479M), 0.0M awarded.

Exceptions: 21 (3 warning, 18 info); see the exception log (X-rows).

Rating definitions: Buy ≥ +15.0% 12-month return, Sell ≤ -10.0%, Hold between.

10. SENIOR ANALYST REVIEW

Status: DRAFT. Decisions needed:

1. Approve or amend the reading of the quarter (section 2.3).
2. Approve or reject the estimate changes (section 4).
3. Resolve open issues X-19, X-20, X-21 (exception log).
4. Approve the valuation method, target multiple and scenario weights (section 6).
5. Confirm the rating and price target.
6. Approve the note for distribution.

Reviewer: _____ Approve rating ☐ Approve PT ☐ Approve estimates ☐
