msft-datacenter-risk-fy2025

dev grounding drafted unverified

What risks does Microsoft identify regarding its dependence on cloud infrastructure and data centers?

EXPECTED ANSWER

ANSWER MUST SAY

- Our datacenters depend on the availability of permitted and buildable land, predictable energy, networking supplies, and servers, including graphics processing units and other components.
- There are limited suppliers for certain device and datacenter components.
- The investments we are making in cloud and AI infrastructure and devices will continue to increase our operating costs and may decrease our operating margins.

Source: MSFT FY2025, Item 1A — Risk Factors · filing

OPERATIONAL RISKS
We may have excessive outages, data losses, and disruptions of our online services if we fail to maintain an adequate operations infrastructure. Our increasing user traffic, growth in services, and the complexity of our products and services demand more computing power. We spend substantial amounts to build, purchase, or lease datacenters and equipment and to upgrade our technology and network infrastructure to handle more traffic on our websites and in our datacenters. Our datacenters depend on the availability of permitted and buildable land, predictable energy, networking supplies, and servers, including graphics processing units and other components. The cost or availability of these dependencies could be adversely affected by a variety of factors, including the transition to a clean energy economy, local and regional environmental regulations, and geopolitical disruptions. These demands continue to increase as we introduce new products and services and support the growth and the augmentation of existing services, including through the incorporation of AI features and/or functionality. We are rapidly growing our business of providing a platform and back-end hosting for services provided by third parties to their end users. Maintaining, securing, and expanding this infrastructure is expensive and complex, and requires development of principles for datacenter builds in geographies with higher safety and reliability risks. It requires that we maintain an Internet connectivity infrastructure and storage and compute capacity that is robust and reliable within competitive and regulatory constraints that continue to evolve. Inefficiencies or operational failures, including temporary or permanent loss of customer data, outages, insufficient Internet connectivity, insufficient or unavailable power or water supply, or inadequate storage and compute capacity could diminish the quality of our products, services, and user experience, resulting in contractual liability, claims by customers and other third parties, regulatory actions, damage to our reputation, and loss of current and potential users, subscribers, and advertisers, each of which could adversely affect our business, operations, financial condition, and results of operations.

Source: MSFT FY2025, Item 1A — Risk Factors · filing

We may experience supply or quality problems. There are limited suppliers for certain device and datacenter components. We continue to identify and evaluate opportunities to expand our datacenter locations and increase our server capacity to meet the evolving needs of our customers, particularly given the growing demand for AI services. Capacity available to us may be affected as competitors use some of the same suppliers and materials for hardware components. If components are delayed or become unavailable, whether because of supplier capacity constraint, industry shortages, legal or regulatory changes that restrict supply sources, or other reasons, we may not obtain timely replacement supplies, resulting in reduced sales or inadequate datacenter capacity to support the delivery and continued development of our products and services. Component shortages, excess or obsolete inventory, or price reductions resulting in inventory adjustments may increase our cost of revenue. Datacenter servers, Xbox consoles, Surface devices, and other hardware are assembled in Asia and other geographies that may be subject to disruptions in the supply chain, resulting in shortages which could adversely affect our business, operations, financial condition, and results of operations.

Source: MSFT FY2025, Item 7 — Management's Discussion and Analysis · filing

The investments we are making in cloud and AI infrastructure and devices will continue to increase our operating costs and may decrease our operating margins. We continue to identify and evaluate opportunities to expand our datacenter locations and increase our server capacity to meet the evolving needs of our customers, particularly given the growing demand for AI services. Our datacenters depend on the availability of permitted and buildable land, predictable energy, networking supplies, and servers, including graphics processing units (“GPUs”) and other components. Our devices are primarily manufactured by third-party contract manufacturers. For the majority of our products, we have the ability to use other manufacturers if a current vendor

> becomes unavailable or unable to meet our requirements. However, some of our products contain certain components for which there are very few qualified suppliers. Extended disruptions at these suppliers could impact our ability to manufacture devices on time to meet consumer demand. …

nvda-export-controls-fy2025

test grounding drafted unverified

What does NVIDIA say about the risks from U.S. export controls?

EXPECTED ANSWER

ANSWER MUST SAY

- Export controls could disrupt our supply chain and distribution channels, negatively impacting our ability to serve demand, including in markets outside China and for our gaming products.
- Reduced demand due to export controls could also lead to excess inventory or cause us to incur related supply charges.

> **Source:** NVDA FY2025, Item 1A — Risk Factors · filing
>
> Export controls could disrupt our supply chain and distribution channels, negatively impacting our ability to serve demand, including in markets outside China and for our gaming products. The possibility of additional export controls has negatively impacted and may in the future negatively impact demand for our products, benefiting competitors that offer alternatives less likely to be restricted by further controls. Repeated changes in the export control rules are likely to impose compliance burdens on our business and our customers, negatively and materially impacting our business.
> Increasing use of economic sanctions and export controls has impacted and may in the future impact demand for our products or services, negatively impacting our business and financial results. Reduced demand due to export controls could also lead to excess inventory or cause us to incur related supply charges. Additional unilateral or multilateral controls are also likely to include deemed export control limitations that negatively impact the ability of our research and development teams to execute our roadmap or other objectives in a timely manner. Additional export restrictions may not only impact our ability to serve overseas markets, but also provoke responses from foreign governments, including China, that negatively impact our supply chain or our ability to provide our products and services to customers in all markets worldwide, which could also substantially reduce our revenue. Regulators in China have inquired about our sales and efforts to supply the China market and our fulfillment of the commitments we entered at the close of our Mellanox acquisition. For example, regulators in China are investigating whether complying with applicable U.S. export controls discriminates unfairly against customers in the China market. If regulators conclude that we have failed to fulfill such commitments or we have violated any applicable law in China, we could be subject to financial penalties, restrictions on our ability to conduct our business, restrictions regarding our networking products and services, or otherwise impact our operations in China, any of which could have a material and adverse impact on our business, operating results and financial condition.

aapl-tariffs-fy2025

dev grounding drafted unverified

How could tariffs and trade restrictions affect Apple's business?

EXPECTED ANSWER

ANSWER MUST SAY

- Restrictions on international trade, such as tariffs and other controls on imports or exports of goods, technology or data, can materially adversely affect the Company's business and supply chain.
- Beginning in the second quarter of 2025, new tariffs were announced on imports to the U.S.

> **Source:** AAPL FY2025, Item 1A — Risk Factors · filing
>
> Political events, trade and other international disputes, geopolitical tensions, conflict, terrorism, natural disasters, public health issues, industrial accidents and other business interruptions can have a material adverse effect on the Company and its customers, employees, suppliers, contract manufacturers, logistics providers, distributors, cellular network carriers and other channel partners.
> The Company has a large, global business with sales outside the U.S. representing a majority of the Company's total net sales, and the Company believes that it generally benefits from growth in international trade. A significant majority of the Company's manufacturing is performed in whole or in part by outsourcing partners located primarily in China mainland, India, Japan, South Korea, Taiwan and Vietnam, in addition to sourcing from partners and facilities located in the U.S. Restrictions on international trade, such as tariffs and other controls on imports or exports of goods, technology or data, can materially adversely affect the Company's business and supply chain. The impact can be particularly significant if these restrictive measures apply to countries and regions where the Company derives a significant portion of its revenues and/or has significant supply chain operations. Restrictive measures can increase the cost or limit the availability of the Company's products and the components and rare earths and other raw materials that go into them. Restrictive measures can also require the Company to change suppliers, restructure business relationships and operations, refrain from offering and distributing or cease to offer and distribute affected products, services and third-party applications to its customers, and increase the prices of its products and services. Changing the Company's business and supply chain in accordance with new or changed restrictions on international trade can be expensive, time-consuming and disruptive to the Company's business and results of operations. Trade and other international disputes can also have an adverse impact on the overall macroeconomic environment and result in shifts and reductions in consumer spending and negative consumer sentiment for the Company's products and services, all of which can further adversely affect the Company's business and results of operations. Such restrictions can be announced with little or no advance notice, which can create uncertainty, and the Company may not be able to effectively mitigate any or all adverse impacts from such measures. Global supply chains can be highly concentrated, and an escalation of geopolitical tensions or conflict could result in significant disruptions. Beginning in the second quarter of 2025, new tariffs were announced on imports to the U.S. ("U.S.

What risks does Microsoft see in developing and deploying AI?

EXPECTED ANSWER

ANSWER MUST SAY

- AI algorithms or training methodologies may be flawed.
- Content generated by AI systems may be offensive, illegal, inaccurate, or otherwise harmful.

Source: MSFT FY2025, Item 1A — Risk Factors · filing

> Issues in the development, deployment, and use of AI may result in reputational or competitive harm or liability . We are building AI into many of our offerings, including our productivity services, and we are also making AI available for our customers to use in solutions that they build. This AI may be developed by Microsoft or others, including our strategic partner, OpenAI. We expect these elements of our business to grow. We envision a future in which AI operating in devices, applications, and the cloud helps our customers be more productive in their work and personal lives. As with many innovations, AI presents risks and challenges that could affect its adoption, and therefore our business. AI algorithms or training methodologies may be flawed. Datasets may be overbroad, insufficient, or contain biased or inaccurate information. Content generated by AI systems may be offensive, illegal, inaccurate, or otherwise harmful. Ineffective or inadequate AI development or deployment practices by Microsoft or others could result in incidents that impair the acceptance of AI solutions, cause harm to individuals, customers, or society, or result in our products and services not working as intended. Human review of certain inputs and outputs may be required, including for agentic AI systems that can take actions autonomously. Our implementation of AI systems could result in legal liability, regulatory action, brand, reputational, or competitive harm, or other adverse impacts. These risks may stem from issues related to intellectual property, data privacy, and other claims associated with AI training and outputs. They are further compounded by the evolving regulatory landscape, with new laws emerging globally, including the European Union (“EU”). Some AI scenarios present ethical issues or may have broad impacts on society. There is also rising divergence globally in how to address these issues and impacts, with the result that we will need to navigate a web of different tensions across geographies.

Why did Apple's products gross margin percentage change in fiscal 2025?

EXPECTED ANSWER

ANSWER MUST SAY

- Products gross margin percentage decreased during 2025 compared to 2024 primarily due to a different mix of products and tariff costs, partially offset by other favorable costs.

> **Source:** AAPL FY2025, Item 7 — Gross Margin · filing
>
> ```
> Products Gross Margin
> Products gross margin increased during 2025 compared to 2024 primarily due to favorable costs and a different mix of products, partially offset by tariff costs.
> Products gross margin percentage decreased during 2025 compared to 2024 primarily due to a different mix of products and tariff costs, partially offset by other favorable costs.
> Services Gross Margin
> Services gross margin increased during 2025 compared to 2024 primarily due to higher Services net sales and a different mix of services.
> Services gross margin percentage increased during 2025 compared to 2024 primarily due to a different mix of services, partially offset by higher costs.
> The Company’s future gross margins can be impacted by a variety of factors, as discussed in Part I, Item 1A of this Form 10-K under the heading “Risk Factors.” As a result, the Company believes, in general, gross margins will be subject to volatility and downward pressure.
> Operating Expenses
